Introduction

There is only one chance to make a good first impression and this is precisely the reason Bauporte designs, manufactures, installs and maintains impressive entrances for its customers.

Bauporte History

Bauporte was founded in 1992 and in 1999 it took over Grothkarst, a German company that had been developing and constructing high-quality doors since 1908. Karel E. Bouman, the current Owner and Director, with a wealth of experience in the door and entrance industry, correctly identified a gap in the market for a supplier of custom-made rather than mass-produced doors and Bauporte was born.

NOTHING IS MORE ELEGANT THAN AN ATTRACTIVE ENTRANCE

Enhance your grandeur with Bauporte

Increasingly sophisticated end-users demanded higher standards of quality and innovation for their buildings including seeking unique, customised aesthetic and functional solutions for their entrances. Bauporte understood and relished this challenge and, within a very short time of its inception, was delivering outstanding service and products to Belgium, Canada, China, Germany, the Netherlands, the UK and the USA.

A Respected Reputation

In Bauporte terms, entrance doors are not just "doors"; we mean splendidly designed entrances, constructed to the highest specifications and produced from ultra-modern materials. Companies throughout the world are overwhelmingly satisfied with Bauporte products and service - and we are confident that you will feel the same.

20

NOTHING IS MORE ELEGANT THAN AN ATTRACTIVE ENTRANCE

Expertise and innovation

The company continues to expand its activities while continuously investing in expertise and innovation; providing astonishing new designs, including extremely tall, full-glass revolving doors and bespoke automatic sliding and swing doors with in-ground drive units.

International management and expertise has been further strengthened by the arrival of David Bunkall in the UK. David has been working in the global door manufacturing industry for 20 years and has now chosen to become associated with the durable, high-quality products that Bauporte offers its customers.

Bauporte now occupies a unique position in the global entrance market and no matter the type of entrance; Bauporte has the solution, or will develop one to suit. Bauporte's passion and perseverance enables it to rise above the competition and to overcome even the most obstinate entrance problems. Bauporte may be a relatively small company, but it certainly set the standards that others try to follow.

Three little, well-known words:

“Yes we can”...

...they express the difference that Bauporte brings to a global market that typically offers “more of the same.” This difference begins with employees. Their belief in their own abilities is crucial in this respect, together with the iron will to work hard for a collective purpose: To build the greatest possible customer satisfaction into the design and function of an entrance door.

The difference is also evident in Bauporte’s customers; we work with discerning clients who actively seek out high-quality, custom-made entrances. Our customers are enterprising individuals or organisations, looking to distinguish themselves from the crowd by creating something special and who are not willing to accept second best. Where there’s a will, there’s a way; Bauporte is based on this principle.

Creating designs, setting goals, rolling up our sleeves and displaying determination, all these qualities are central to the beliefs of our customers, employees and organisation. This is our collective binding factor; essentially our whole philosophy is embodied in these three small words.

Our Strengths - WHY CHOOSE BAUPORTE?

Bespoke entrances and doors

Bauporte employees have unrivalled experience in the production and installation of bespoke doors and entrance systems. Always looking to innovate and push the boundaries of door design, Bauporte has brought many new products and processes to the market, including the first full-glass revolving door and the tallest revolving door in the world. With a pedigree like this, it is little wonder that world-leading architects come to Bauporte when something special is required.

Product quality and craftsmanship

At Bauporte we believe little, if anything, is impossible; we always try to raise the bar, to exceed our customers' expectations and to enthusiastically embrace new challenges. All bespoke doors are individually designed and engineered using top class materials to ensure a beautifully finished product.

"Everything-under-one-roof" philosophy

Bauporte has the unique ability to develop and manufacture every component in-house, making it possible to deliver exactly what our customers have in mind, in a proper and expedient manner.

Strength and beauty

Stainless steel is used for the internal framework of Bauporte doors, guaranteeing the maximum design life. This framework can be clad and finished to the customer's requirements with stainless steel, aluminium, brass or even copper. Glass also plays an important role in completing the construction but can also be used to enhance the appearance with effects such as one-piece glass roofs, coloured interlayers, fritting, and integrated colour-changing LED lighting strips.

Remote diagnostics

An optional remote diagnostic service is available on all Bauporte automatic doors; helping save money on repairs and maintenance and minimising any down-time should a problem occur. With this option, the doors are linked via a modem and telephone line, allowing Bauporte to remotely diagnose or adjust the door operation if necessary.

Quality of our service

At Bauporte we recognise the importance of customer service. Our highly experienced in-house design team aim to provide advice and high-quality solutions to all entrance requirements. Everything is done internally; from design and manufacture to installation and maintenance, ensuring the same high quality of service from start to finish. Our highly trained maintenance teams respond quickly and efficiently to any problems and are ready to serve our customers 24 hours a day, 7 days a week.

A large, high-quality photograph of a modern revolving door, partially visible on the right side of the page. The door is made of glass and metal, and is set against a dark background. The text "Revolving Doors" is overlaid on the image in a white, sans-serif font, oriented vertically.

Revolving Doors

Bauporte Revolving Doors offer an unlimited range of variations and defy convention.

We specialise and excel in very tall revolving doors and can provide models with rotating doorsets over 7000mm high.

Offering all the traditional benefits of energy efficiency and draught prevention, our custom made doors are all available with 2, 3 or 4 door wings.

Enlarging the diameter and providing fully automatic operation increases the capacity and provides access for larger items such as suitcases and wheelchairs. Doors with diameters over 3400mm are equipped with folding door wings as standard, allowing them to be used as emergency escape doors.

Full Vision Revolving Doors

Full Vision revolving doors from Bauporte feature all-glass construction with glass roofs and are available as Circular or Royal versions depending on diameter.

THE BAUPORTE VISION

All-glass, bespoke revolving doors for an impressive entrance with timeless design

Circular Full Vision revolving doors are available with diameters of up to 3100mm, with manual or automatic operation. Drive units for automatic versions are concealed in the floor under the entrance matting or can be installed on the ceiling of a basement below.

Royal Full Vision revolving doors are available with diameters of over 3100mm, with automatic operation.

All versions are available in custom dimensions and have the option of curved sliding doors to close off the opening at night if required.

All automatic doors can be activated by radars, card readers or push-buttons as required.

THE BAUPORTE VISION

Revolving Doors

Prestige Revolving Doors

Prestige revolving doors have a more conventional construction than the Full Vision, with either glazed or solid curved drum walls and a solid canopy.

20

THE BAUPORTE VISION

Energy efficient revolving doors that can be customised to suit any design

Circular Prestige revolving doors are available with diameters of up to 3100mm, with manual or automatic operation.

Royal Prestige revolving doors are available with diameters of over 3100mm, with automatic operation.

All automatic doors can be activated by radars, card readers or push-buttons as required. Security, fire retardant and bullet & impact resistant versions are all available on request.

Nostalgia Revolving Doors

Nostalgia revolving doors are designed to recreate the grandeur of entrances of bygone days with elegant custom designs, using metal and wood to recreate an antique appearance but adding the benefits of modern technology.

THE BAUPORTE VISION

Classical antique-style revolving doors in metal and wooden finishes

Nostalgia revolving doors can exactly replicate existing doors if required, or they can mimic the vintage style using contemporary specialist materials.

Circular Nostalgia revolving doors are available with diameters of up to 3100mm, with manual or automatic operation.

Royal Nostalgia revolving doors are available with diameters of over 3100mm, with automatic operation.

Automatic Doors

Bauporte Elegance Automatic Doors offer the possibility to take conventional doors to a new level with dimensions and designs limited only by the imagination and technical limits of materials.

We specialise in large and complex entrances; often incorporating in-ground drive units into our sliding, swing and balance doors.

Offering the benefits of conventional automatic doors, our custom made Elegance entrances are available in a variety of single, double, multi, telescopic and straight or curved configurations.

Elegance Automatic Sliding Doors

Elegance Automatic Sliding Doors provide simple convenient entrances with drive units mounted on the header or in-ground.

THE BAUPORTE VISION

Reliable, convenient sliding door entrances for busy buildings

Configurations:

- Single sliding
- Bi-parting
- Telescopic; sliding from the centre or to either side

- Straight
- Curved

Heavy duty drive units are available and door leaves are framed with stainless steel, aluminium or custom metal or, alternatively, full-glass construction. Fire- and smoke-resistant and reinforced versions are all available.

Elegance Automatic Swing Doors

Elegance Automatic Swing Doors provide simple convenient entrances with drive units mounted on the header, in-ground or even on the ceiling of a basement below the door.

THE BAUPORTE VISION

DDA compliant automatic swing doors for easy access

Configurations:

- Single door wing
- Double door wing

- Straight
- Curved

Heavy duty drive units are available and door leaves are framed with stainless steel, aluminium or custom metal or, alternatively, full-glass construction. Fire- and smoke-resistant and reinforced versions are all available.

THE BAUPORTE VISION

Elegance Automatic Balance Doors

Elegance Automatic Balance Doors, also known as pivot doors, provide simple convenient access, with drive units mounted on the header, in-ground or even on the ceiling of a basement below the door.

Automatic pivot doors, ideal for windy conditions

Configurations:

- Single door wing
- Double door wing
- Multiple door wing

Heavy duty drive units are available and door leaves are framed with stainless steel, aluminium or custom metal or, alternatively, full-glass construction. Fire- and smoke-resistant and reinforced versions are all available.

The balance door principle is ideally suited to wide entrances where severe or uneven wind loadings are experienced.

Elegance Automatic Folding/Stacking Doors

Bauporte has developed a folding/stacking entrance door system specifically for department stores and shopping centres.

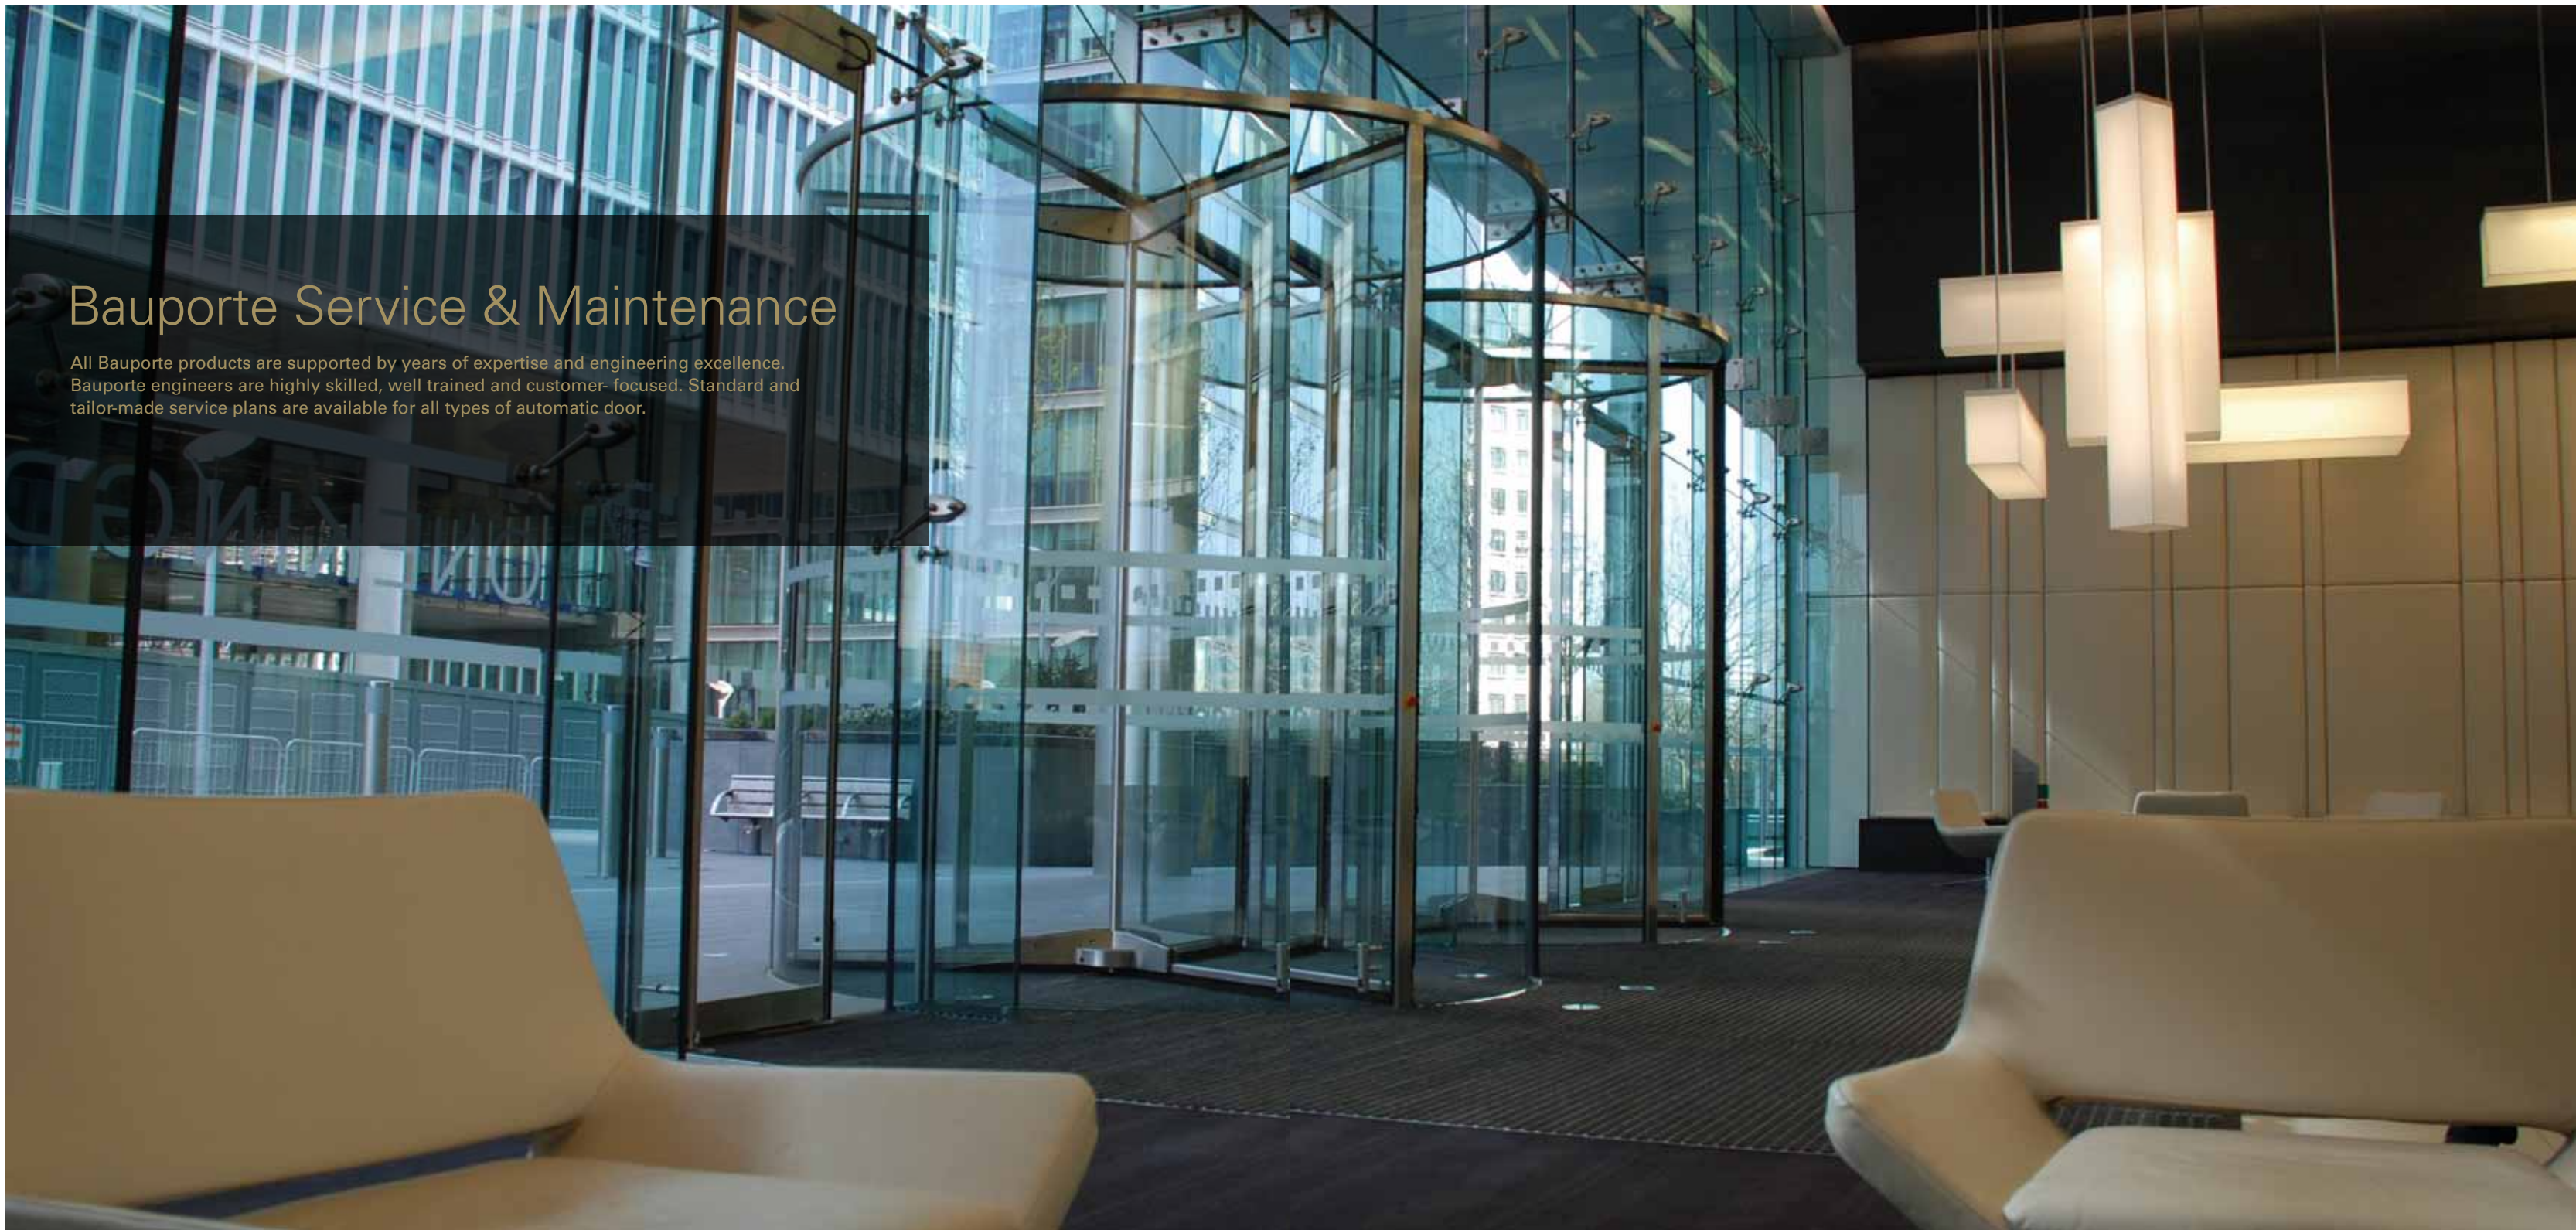

Unique multi-functional entrance system adapts to weather conditions

This multi-functional type of entrance consists of 180° degree, manual or automatic swing doors, with overhead heaters, which can be moved to the side and stacked out of the way. The door leaves can be stowed manually or automatically. The advantage of this folding / sliding entrance under various weather conditions:

- In poor weather conditions, the swing doors are used for entry/exit. Linking the heaters and the self-closing doors, minimise draughts while allowing free passage.
- In average weather conditions, the door leaves can be opened and locked in the 90° position (either manually or electro-mechanically). Free passage from inside to outside the building, and vice versa is possible. Use of the entrance heaters is optional.
- In good weather conditions the door leaves are opened and stacked to the sides to create a completely open entrance with unrestricted access. Use of the entrance heaters is optional.

Bauporte Service & Maintenance

All Bauporte products are supported by years of expertise and engineering excellence. Bauporte engineers are highly skilled, well trained and customer- focused. Standard and tailor-made service plans are available for all types of automatic door.

THERE IS ONLY ONE CHANCE TO MAKE A GOOD FIRST IMPRESSION

Other Bauporte bespoke entrance products
